Critical Criteria

- ___ Failure to take or verbalize body substance isolation precautions
- ___ Failure to initiate or call for transport of the patient within 10 minute time limit
- ___ Failure to determine scene safety
- ___ Failure to assess for and provide spinal protection when indicated
- ___ Failure to voice and ultimately provide high concentration of oxygen
- ___ Failure to assess/provide adequate ventilation
- ___ Failure to find or appropriately manage problems associated with airway, breathing, hemorrhage or shock
- ___ Failure to differentiate patient's need for immediate transportation versus continued assessment/treatment at the scene
- ___ Performs other assessment before assessing/treating threats to airway, breathing and circulation
- ___ Uses or orders a dangerous or inappropriate intervention

You must factually document your rationale for checking any of the above critical items in the space below.
